

# ZixGateway®

## Email Encryption Made Easy

### Who uses Zix?

14,500+ customers including:

- All Federal Financial Institutions Examination Council (FFIEC) regulators
- The U.S. Securities and Exchange Commission (SEC)
- 30% of U.S. banks
- 1,200+ U.S. hospitals
- 30+ Blue Cross Blue Shield (BCBS) organizations

### Benefits:

- Automated email encryption, no user training required
- Improved compliance with federal, state and industry regulations
- Send securely to anyone, anywhere and on any device
- Transparent encryption from sender to recipient
- Visibility into encrypted email for improved compliance
- Simplified implementation support of TLS for email

### Features:

- Policy-based email encryption
- Content scanning with robust compliance filters
- Multiple secure delivery options using patented Best Method of Delivery (BMOD)
- Automatic, bi-directional email encryption between ZixGateway customers
- Innovative dashboard with instant access to more than 30 reports
- Policy-based TLS with secure fail-over

ZixGateway is a policy-based email encryption solution that makes securing your sensitive email communication easy. ZixGateway scans the content of all your outbound email and automatically encrypts based on policies you define. It automatically ensures compliance of your email communication without requiring special training or procedures for your employees. ZixGateway is available as physical or virtual appliance and as a hosted solution.

## Policy-based Email Encryption

ZixGateway provides robust filtering technology that enables you to define and manage policy rules for protecting sensitive email content and ensuring compliance. Pre-defined filters are available for healthcare, financial, state privacy, education and more. Based on the email content you can determine if the email should be blocked, routed, quarantined or encrypted.

## Bi-Directional Transparent Delivery

Just as ZixGateway automatically scans your email, it also automatically determines the most efficient way to securely deliver your messages using our patented Best Method of Delivery<sup>SM</sup>. Through the Best Method of Delivery, ZixGateway delivers encrypted email to anyone, anywhere and often transparently.

ZixGateway offers the industry's only bidirectional transparent email encryption, enabling senders and recipients to exchange encrypted email without any extra steps. When you send an encrypted email to another ZixGateway customer, the message and replies are encrypted transparently, so that not even a password is needed. On average, more than one-third of our customers' recipients receive their encrypted email messages transparently.

## About Zix

Zix is a trusted leader in email data protection. Zix offers industry-leading email encryption, a unique email data loss prevention (DLP) solution, and an innovative bring your own device (BYOD) email solution to meet your company's data protection and compliance needs. Zix is trusted by the nation's most influential institutions in healthcare, finance and government for easy-to-use secure email solutions. ## Superior Support for TLS

If you have ever tried to use TLS to secure email communication with partners, you are probably familiar with the manual effort required to securely configure and manage each TLS connection. ZixGateway simplifies the set up and management of TLS by making it a part of your email encryption policies. With ZixGateway, you can enable TLS by simply checking TLS as a delivery option in your policies. By including TLS in a policy, you have increased control and reporting visibility on your TLS encrypted email.

ZixGateway lets you define the level of certificate authentication and encryption used with TLS, so you can improve security of your TLS connections. When using TLS, secure email is delivered transparently, further enhancing ease of use. Additionally, if TLS is not available, you can configure ZixGateway to fall-back to an alternative delivery method to ensure the email is still delivered securely.

## Flexible Delivery

When sending to recipients who do not have email encryption capabilities, ZixGateway offers you two different delivery methods – ZixPort® and ZixDirect™. ZixPort is a secure portal that makes receiving an encrypted email easy, even on a mobile device. You can also brand and integrate ZixPort into your corporate portal. ZixDirect allows the email to be delivered directly to a user's inbox as an HTML attachment. All of these options combine to create the Zix Best Method of Delivery, which automatically determines the most secure and transparent method of sending your message.

## State-of-the-Art Reporting Dashboard

ZixGateway also offers you superior visibility through a customizable reporting dashboard. With more than 25 different reports, the dashboard provides you instant access to information about outbound and inbound email messages, including what policies were triggered, what delivery method was used, the number of blocked messages, and top senders and receivers.
