

# Microsoft Office 365

**It's not breaking news that organizations small and large are moving away from on premises deployments of Microsoft Office. There are many benefits to moving to SaaS deployment models and Office 365 fits perfectly into this category. With increased security, mobility, and ease of use, there is very little reason to remain on premises.**

Office 365 reduces your infrastructure footprint and frees your IT staff. For Instance Skype for Business can be used as a collaboration tool, and Microsoft Teams can be used to integrate file storage, workplace chat, and video meetings all into one application.

## Office 365 Key Features

- Provides desktop and online Office applications
- One license can cover up to 5 devices per user
- 1 TB of OneDrive Storage included in all licenses
- Integrated Skype for Business & Microsoft Teams

## How does Office 365 benefit my business?

### Work Anywhere

Sync data between your Office applications and all of your devices seamlessly. Collaborate across your business from anywhere with access to everything you need in real time.

### Reduced IT Management

No patching, updating or maintaining your Exchange environment in house. Microsoft handles all updates with no downtime and the latest versions of applications are rolled out as soon as they're available.

### Enhanced Security

Office 365 has native anti-spam and anti-virus technology built in. Administrators can apply access controls to determine who can read, write and share information across your organization.

### Scalable

Adding users is quick and easy. You no longer have to worry about capital purchases when adding capacity to your organization, just add a license and apply a profile.
