CloudStart

Leading cloud providers typically offer remote-only support for migration and implementation, leaving the responsibility for the hands-on work and planning to you, the client. Successful cloud migrations require careful planning and design to match your specific needs and detailed coordination for seamless implementation. However, on-site or more fully consultative engagements from cloud providers can be prohibitively expensive.

CNP CloudStart is a fully customizable and managed hands-on approach for premise-to-cloud and cloud-to-cloud migrations. Our CloudStart team expertly advocates, translates, reviews, plans, and transitions you to the Cloud so you can focus on what's most important to your business.

Guides and acts as the client advocate	Translates from provider to plain English	Reviews phone lines in current system	Creates porting plan for lines	Transitions existing system to new Cloud platform

The 4 CloudStart Steps to Success:

1 Solutions Design Review
- Call routing design and planning
- Carrier services review
